The Dental Implant Centre

*GUIDE TO DENTAL IMPLANTS*

www.thedentalimplantcentre.sg
Matching Mother Nature

We’ve often been told that there’s simply no way to fill a gap in your teeth so that it feels like your real teeth. That’s simply no longer the case. Dental implants are tomorrow’s solution to the age old problem of missing one or more teeth.

While a dentist can bridge the gap in the short term, dental implants are the safe way to enjoy life, secure in the knowledge that your smile will light up the room again. You’ll be happy to laugh and have the confidence to eat what you like, when you like.

What Exactly Are Dental Implants?

Dental implants are small titanium screws that anchor new replacement teeth into the jawbone giving you the ability to live life to the full, happy in the knowledge that your dental implants are safe and secure.

There’s more to dental implants than titanium and replacements. We’ll take you through the full range of treatment procedures so that you’ll be able to decide the perfect option for you and your treatment.

A titanium dental implant mirrors the root of a tooth. Securely anchoring the implant to the jawbone, the implant looks and feels like a natural tooth.
Beautiful Teeth A Desire as Old as Time

History documents efforts to replace teeth as long ago as 4,000 years in China, but it was only in the 1950’s that things began to take shape.

Discoveries in biomedical research meant that scientists realized that certain types of metal became part of the patient – perfect for securing dental implants in the jawbone. There are now over 50 years of well documented clinical research and experience that demonstrate the reliability of the modern titanium implant. It’s not just about the science though.

It’s about the millions of people all over the world who have got their smiles back from one small...
Dental Implants – Titanium Roots

Titanium dental implants are fixed to the jawbone. They are the root for your new tooth.

Your dental implants will be tailored to you to ensure it is the best fit for your jawbone.

Abutment Attaches To Dental Implant

Abutments are the element that secures your new tooth to your new tooth root.

Usually made from titanium or ceramic, they work with your new tooth root to anchor your new tooth to your jawbone.
Crown Attaches To Abutment

Pearly white and shining bright!

Your dental implant and abutment are firmly anchored and form the foundation for your new tooth or teeth to be attached.

You may opt for a Crown (single tooth), a Bridge (several or many teeth), or a Fixed Prosthesis (all teeth).
Good News!

What sets dental implants apart from traditional dentistry is the fact that they won’t affect the healthy teeth that normal crowns and bridge use.

The dental implants work independently of your other teeth and work with the jawbone to become a fully integrated part of your mouth, without bone loss or receding gums.
For You, For the Rest of Your Life!

Why Implants?

- Dental implants are the reliable, safe, and permanent option for tooth replacement
- Dental implants mean that you won’t have to rely on uncomfortable and unreliable dentures and the never ending quest to find an adhesive that feels as good as natural teeth.
- Dental implants bring all the benefits of strong, natural teeth – eat, smile and talk naturally.
✓ Dental implants become part of you, with the jawbone attaching to the titanium implants with the same security and result of a natural tooth and preserving the look and structure of your whole face.

Taking Care of Your Implants

You’ll be able to look after your dental implants just as you look after your natural teeth. Simple!

Toothbrush

Toothpaste
Dental Floss

Our Solutions Are Tailor Made To Match Your Unique Needs

Like everyone’s dental impression, every one’s teeth are different. Dental implants are the solution that works with your natural teeth to create a dazzling smile – whether you need to replace one or many.

Dental implants will match your exact requirements.

Dental implant treatment is often straightforward, performed in the dental surgery. Normally needing only a local anesthetic, you will be able to leave your dentist’s surgery with your new implants straight away.

As your treatment will be tailor made, so will your consultation time. Our dentist will talk you through the process first.
The Single Tooth Solution

If you are missing only one tooth, this can be simply replaced by a single crown attached to a dental implant.

After

Bridging the Gap

With all dental implants, there are always options. When replacing more than one missing tooth, you can replace teeth using the individual crown option or a bridge attached to several dental implants. It’s whatever works best for you...
A Full Set of Teeth (All-On-4)

Sometimes, dental implants are needed to replace a whole upper or lower jaw, or both. Dental implants are the reliable and secure option for the attachment of a full bridge to several implants. A prosthesis option is also available for cleaning.

"All-On-4 Implants"

Frequently Asked Questions

Q. Can anyone have dental implants?

A. It’s important that the jawbone is fully developed before dental implants can be inserted. Patients unusually must be older than 18 years of age.

Q. How much do dental implants cost?

A. As each set of dental implants are tailor made, the length and cost of your treatment depends on your personal dental circumstances and what needs to be achieved. Contact us for a complimentary consultation and we will be able to assess your case and discuss costs with you.

Q. Are there differences between Dental Implant brands?

A. The quality of dental implants can vary from very low quality to top of the range.
Many different factors impact the quality of dental implants – from the method and/or location of manufacture, from design to finish. It’s worth spending time researching as with most things the quality may have implications further down the line.

Q. How long will my new tooth/teeth last?

A. With proper care your implants should last the rest of your life.

Q. Will I be in pain after the procedure?

A. As with many procedures, there will be sensitivity and swelling. This should pass in a matter of days. We can certainly offer advice on effective pain relief should you need it.

Q. Do I get my new teeth and implants on the same day?

A. Normally, some healing time is factored in to allow your implants to bond with your jawbone. You will receive a temporary tooth until the healing period is over and you can have your new teeth fitted.

Q. Can I chew, crunch and eat anything with my dental implants?

A. Yes – you should be able to return to living normally and that includes eating.

Q. Can an implant be placed right after removing a natural tooth?

A. Our dentist will decide by considering the condition of the extraction site and your jawbone.
Still Got Questions?

Take advantage of our No Obligation, No Pressure Consultation with Dr. Samintharaj Kumar today and get all your questions answered (see below for details).

Our Offer to You - A Complimentary Implant Consultation

We'd like to offer you a Complimentary, 100% No Obligation Consultation. Our usual charge for an initial consultation is $597, but today we're offering it with absolutely No Obligation.

This is your opportunity to ask questions as well as receive a personalized Treatment Plan.

To take advantage simply call: +65 6532 2644

We look forward to seeing you soon!
